Preface

This document has been prepared as a service to architects, engineers, designers, and installers of fire protection systems to provide basic information on the codes, policies, and requirements of Prince William County Fire Marshal's Office (FMO). The information provided represents the current **minimum** requirements of the FMO on new construction of buildings, installation and modification of fire protection systems, and other fire prevention related issues commonly encountered at the time of its' writing and does not represent all of the building and fire code requirements enforced.

The requirements set forth in this document should **not be considered** to be all inclusive, as application of the State and County Fire Prevention Code and other nationally recognized codes and recommended practices is constantly being evaluated and modified when found necessary. The information provided for fire protection plan submissions is provided for reference only. Each fire protection system installed or modified is required to comply with all applicable codes and standards as provided in the Uniform Statewide Building Code and Virginia Statewide Fire Prevention Code in place at the time of installation or modification.

Questions concerning the information contained within this manual should be directed to the Prince William County Fire Marshal's Office at 703-792-6360.

Table of Contents

	Page
Applicable Codes and Standards	4
Plan Submittal Chart	5
Fire Alarm System Fire Protection Plan Submission – Minimum Requirements	6
Fire Alarm Express Permits	7
Automatic Fire Sprinkler System Fire Protection Plan Submission – Minimum Requirements	8-9
Sprinkler Express Permits	10
Sprinkler System Water Supply Submission Requirements	11
Fire Pump Calculation Submission Requirements	11
Standpipe Calculations	12
Underground Fire Main Fire Protection Plan Submission – Minimum Requirements	13-14
Commercial Kitchen Hood Protection Plan Submission – Minimum Requirements	15
Emergency Repair Permit	16
Fire Protection Plan Review Process & Walk Thru Process	16-17
Fire Protection System Acceptance Inspections	17-21
After Hours (Overtime) Inspections	21
Minimum Requirements for a Stocking Approval (148)	22
Minimum Requirements for an FMO Final-Tenant Approval (149)	23-24
Fire Protection Permit Plan Review Fee Schedule	25
Inspection Fee Schedule	26

Installation of Pressure Reducing/Regulating Valves on Standpipes	40
Sprinkler Protection in Elevator Hoist Ways and Machine Rooms	41
Fire Protection and Life Safety Procedures in Buildings Under Construction and Renovation	42-43
Placing Fire Protection systems In-Service or Out-Of-Service	44
Fire Watch	45
High-Rise Fire Control System Requirements	46-53

Electronic Access Gate

Access Gate (Click2Enter) – Gate permits (GTE) must be obtained through the Fire Marshal's Office:

The receiver box must be mounted in a manner that allows approaching Police vehicles and F&R apparatus to visually see the activated LED light.

- Unit should include the optional Heater Kit
- There are 2 passwords that are used to protect the programming information. Level 1 and 2. Level 1 is typically used by the installer. A Level 2 password must be provided to allow for reprogramming (such as when the radios are rebanded). Level 2 password must be the same on all devices (Ex: C2Epassword1).
- A master list of all C2E gates will be kept so that maintenance checks can be performed on them.
- The following settings must be verified:
 - ☐ Double pulse activation
 - ☐ Non-Override Latchback must be set at 15 minutes
 - ☐ Range of Operation must be set for line of sight.

If there is a power failure, the gate must default to open.
